Category 6 Shielded Modular Assemblies

PRIORITY ELECTRONICS manufactures a complete line of voice and data modular cable assemblies. PRIORITY utilizes the highest quality connectors and all assemblies are tested for continuity before shipping. All shielded assemblies come with an anti-snag boot integral to the connector. All Cat6 assemblies are offered either channel tested or component compliant tested. Category 6 assemblies are available in any desired length.

A word about Cat 6 Patchcords:

Priority offers two levels of Cat 6 patchcords: 1.) Channel Tested and 2.) Component Compliant Tested.

Channel tested patchcords are combined with a marginal (but passing) permanent link (horizontal cabling and cat 6 jacks). Channel testing is then performed and the patchcord passed or failed depending upon final result. This test result insures Cat 6 performance on most manufacturers Cat 6 Permanent links.

Component Compliant tested patchcords are tested utilizing our Fluke DSP analyser and patchcord adapters. This system fully meets the requirements for component testing as laid out in the TIA/EIA-568-B.2-1 Annex J. and insures the best possible performance over the widest range of different manufacturers permanent links.
